An **Air Knife Enclosure** provides water, air, and mild sound containment for the areas in your conveyor line that require blown air drying. This enclosure can be designed as a section of your new line, with the blower

system, air knives and conveyor section pre-installed, or can be designed to fit over top of your existing line. This unit can be customized to fit your individual line needs, the configurations are limitless. Standard features include clear polycarbonate hinged side doors and stationary end panels, integral stainless steel drip pan with drain, and adjustable end gates to accommodate changing product heights.

Some available options are listed on the reverse side.
